Trang web ban đầu (for customer):

Trang web ban đầu (for staff):

Trang web ban đầu (for manage):

Mô tả về hệ thống:

1. Frontend (FE)

- **Ngôn ngữ**: TypeScript
- **Framework**: Next.js (App Router)
- **UI**: TailwindCSS, shadcn/ui (hoặc Chakra/MUI tùy chọn)
- State Management: Zustand / Redux Toolkit
- Form & Validation: React Hook Form + Zod
- HTTP Client: Axios / fetch API
- API giao tiếp:
 - REST API tới BE TS (Orders/Users/Payments)
 - REST API tới BE Laravel (Catalog/CMS)
 - REST API tới BE Django (Media/HLS)
- Auth: NextAuth (JWT)
- **Deploy**: Vercel (SSR, preview builds)

2. Backend chính (Orders / Users / Payments)

- **Ngôn ngữ**: TypeScript
- Framework: NestJS hoặc Express.js (theo OOP + DDD)
- CSDL: MongoDB (Atlas hoặc AWS EC2)
- **ORM/ODM**: Mongoose
- Cache: Redis (AWS ElastiCache)
- **API**: REST (OpenAPI/Swagger)
- Auth: JWT (SSO giữa các service)
- Unit Test: Jest
- **Deploy**: Docker container → AWS ECS Fargate
- CI/CD: GitHub Actions → build Docker → push ECR → deploy ECS

3. Backend Catalog / CMS

- Ngôn ngữ: PHP
- Framework: Laravel
- **CSDL**: MongoDB (jenssegers/laravel-mongodb package)
- Cache: Redis
- API: REST (CRUD Product, Category, Discount)
- Auth: JWT (xác thực chung với BE TS)
- **Unit Test**: PHPUnit
- **Deploy**: Docker → AWS ECS Fargate
- **CI/CD**: GitHub Actions (composer install, test, docker build, deploy)

4. Backend Media Service (HLS, Video)

- **Ngôn ngữ**: Python
- Framework: Django
- **CSDL**: MongoDB (pymongo)
- Chức năng chính:
 - Nhân upload video (S3 bucket raw)
 - Tạo AWS MediaConvert job → xuất HLS (.m3u8, .ts)
 - o Nhận webhook từ MediaConvert → cập nhật DB
- API: REST (media info, video URL, trang thái)
- **Deploy**: Docker → AWS ECS Fargate
- CI/CD: GitHub Actions

5. Database

- Database chính: MongoDB (Cloud: MongoDB Atlas hoặc AWS EC2)
- Kiểu: Document-based NoSQL
- Kết nối:
 - o BE TS: Mongoose
 - o Laravel: jenssegers/laravel-mongodb
 - o Django: pymongo

6. Cache

- **Hệ thống cache**: Redis (AWS ElastiCache)
- Mục đích: Lưu query hay dùng, session token, giảm tải DB

7. Storage

- Lưu trữ file: AWS S3
 - o Bucket 1: coffee-media-raw (anh, video gốc)
 - o Bucket 2: coffee-media-hls (video HLS đã xử lý)
- CDN: AWS CloudFront (phân phối ảnh & video)
- Bảo mật: Signed URL, Origin Access Control

8. Media Processing (Video → HLS)

- Service: AWS MediaConvert
- Trigger: S3 event → Lambda hoăc Django Service
- Output: .m3u8 + .ts da bitrate
- Playback: hls.js trên FE

9. Auth & Bảo mật

- Cơ chế chung: JWT SSO (Access Token + Refresh Token)
- **FE**: NextAuth
- **BE**: Verify token bằng public key (JWKS)
- **RBAC**: Role customer | staff | admin
- Rate limiting: Nginx / API Gateway

10. CI/CD

- Công cụ: GitHub Actions
- Quy trình:
 - 1. Lint + test
 - 2. Build Docker image

- 3. Push ECR
- 4. Deploy ECS Fargate (blue/green)
- **FE**: Deploy Vercel auto khi push main
- Infra: Terraform quản lý VPC, ECS, S3, CloudFront, Redis, MongoDB, MediaConvert

11. Triển khai & Vận hành

- **FE**: Vercel (Next.js)
- **BE**: AWS ECS Fargate (Docker containers)
- **DB**: MongoDB Atlas hoặc EC2 container
- Cache: AWS ElastiCache Redis
- **Storage/CDN**: AWS S3 + CloudFront
- Logs: CloudWatch Logs
- **Giám sát**: AWS CloudWatch + OpenTelemetry
- Backup: MongoDB backup + S3 versioning
